# Multilog, a leading 3PL in Ukraine, considers Logistics Vision Suite a business enabler for the growth its e-commerce business

Vova is one of the leading integrated suppliers of food for HoReCa segment in Ukraine, with more than 2,000 customers in Kiev and all over Ukraine.

Its customers are restaurants, bars, cafes, hotels as well as manufacturing companies and several supermarket chains.

Logistics and distribution (with fleet owned by the company) are being operated by Multilog, the Logistics Service Provider of Vova that was established recently for this purpose in order to provide efficient and productive services to the company.

The logistics operations run in a Distribution Center in Kiev of about 1,000 square meters and are comprising of ambient, refrigerated and frozen platform.

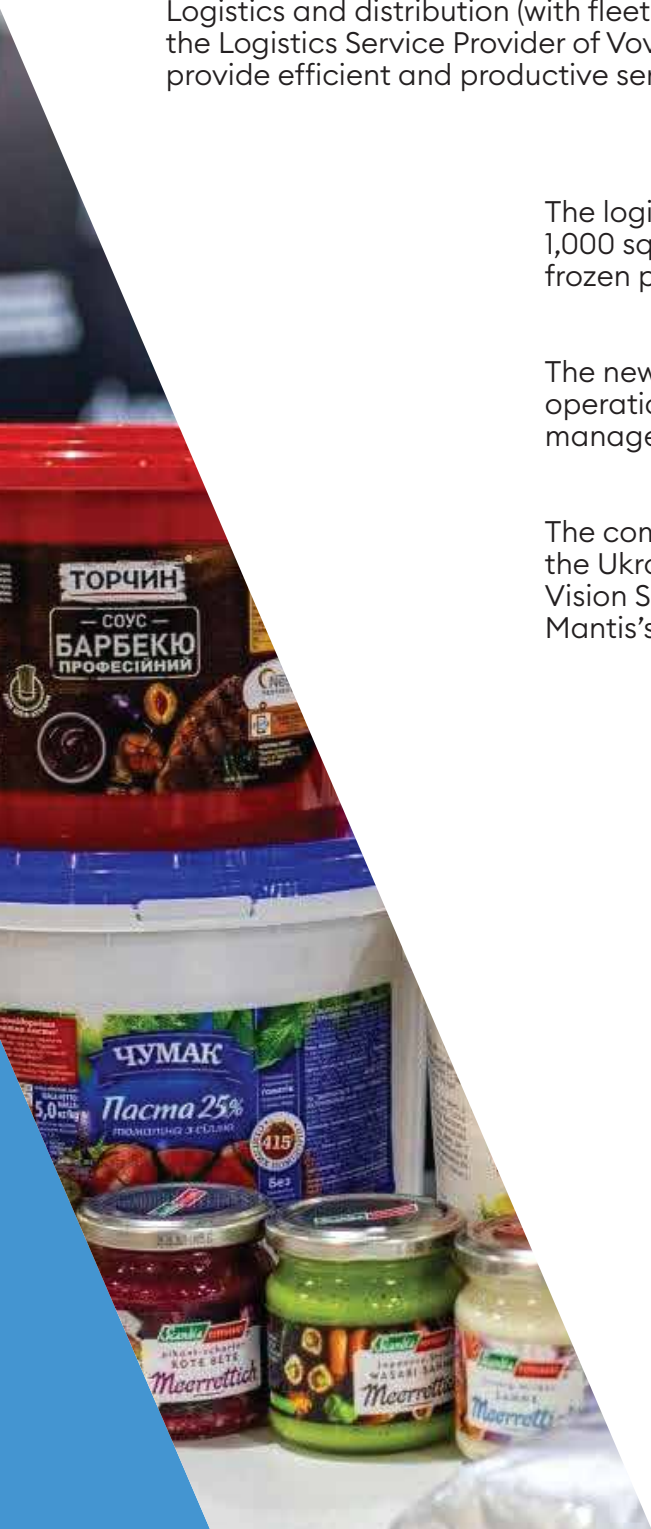

The new distribution center and the complexity of the logistics operations made the use of a WMS system necessary for the management and optimization of the operations.

The company, after an extensive survey of the available solutions in the Ukrainian market, has decided to implement Mantis' Logistics Vision Suite Warehouse Vision that was supplied and implemented by Mantis's partner I-Logistics.

The choice was based on the functionality and the expandability of the software, ensuring that it covers all present and future needs of Vova.

Implementation was performed by I-Logistics and Mantis resources in a short period of time to the full satisfaction of the customer. Today the system is up and running for the ambient, refrigerated and frozen platforms.

I-Logistics, is a Value-Added Reseller of Mantis in Ukraine, not only reselling the software, but also having the trained resources to implement projects in the local market. Mantis is also investing in the local market by setting up a daughter company Mantis Ukraine with the objective to support its local partner and the Ukraine market but also to create an implementation competence center aiming at providing resources for local as well as international projects.

“We are very pleased with our choice to implement Mantis Logistics Vision Suite. Not only we opted for the right platform to address all our requirements, present and future, but we selected a platform that is more than just a WMS. We are considering Logistics Vision Suite as a business enabler that allows us to grow and be competitive, especially in today’s business environment and with our expansion in the field of e-commerce.”
